

# Frequently Asked Questions (FAQ) regarding the Translation Ma

Title	Frequently Asked Questions (FAQ) regarding the Translation Manager OpenSource initiative
URL Name	Frequently-Asked-Questions-FAQ-regarding-the-Translation-Manager-OpenSource-initiative
Article Number	000158243
Environment	Product: OpenEdge Version: 12.x OS: Windows Other: Translation Manager, Visual Translator
Question/Problem Description	Frequently Asked Questions about the Translation Manager and Visual Translator OpenSource initiative
Steps to Reproduce	
Clarifying Information	
Error Message	
Defect Number	
Enhancement Number	
Cause	

Progress has released the Translation Manager and Visual Translator products as OpenSource as the result of customer requests for the source code since the products were removed from OpenEdge offerings in Release 12.0.

## 1. Where can I find the OpenSource repository?

<https://github.com/progress/adetran>

## 2. Will Progress continue to support users of the Translation Manager or Visual Translator tools?

The software is NOT supported by Progress Software from 12.0 forward. It is still supported in OpenEdge 11.7.

## 3. Where can I find more information about building the contents of the repository?

The readme for the repository is available at: <https://github.com/progress/adetran/blob/master/README.md>

## 4. Will Progress maintain the related startup parameters and syntax?

Translation Manager and Visual Translator generate text segments into a specific OpenEdge database schema, which is also provided in the repository. The following options of the COMPILE statement are used by Translation Manager and Visual Translator and will continue to be supported by Progress Software Corp.

- LANGUAGES ( { *language-list* | VALUE ( *expression* ) } )
- TEXT-SEG-GROW = *growth-factor*
- STRING-XREF {*sxreffile* | VALUE ( *expression* ) } [ APPEND [= *logical-expression* ] ]

Likewise the Language (-Ing) startup parameter will continue to be supported.

For issues specific to the above features you should log a support case with Progress Technical Support.

## Workaround
