Description			

History

#1 - 08/30/2026 07:18 PM - Greg Shah

In the work for #11747 and #11746, we have a need to assess the exact API used by each COM and OCX object. We already identify all COM and OCX referents. If we can tie each referent back to the specific control/object that was loaded/assigned, then we can associate every method or property access with that original control/object.

This is very high priority. I can help but you have deeper knowledge of the COM/OCX area, so I was hoping you could jump start this.

#2 - 08/31/2026 05:27 AM - Hynek Cihlar

- Priority changed from Normal to Urgent
- Status changed from New to WIP

#3 - 08/31/2026 07:12 AM - Greg Shah

- Target version set to Converted Code Improvements - Deduplication
- vendor_id deleted (GCD)
- Assignee changed from Hynek Cihlar to Eric Faulhaber

Changes should be put into 11747a.

#4 - 08/31/2026 02:27 PM - Hynek Cihlar

- % Done changed from 0 to 80
- File 2026-08-31_20-20.png added
- File 11808-20260831a.diff added

Greg, I added five new reports in FWD Analytics, see the attached screen shot. They overlap the existing reports, please let me know how you want the final set of reports shaped up.

The implementation is attached for your review.
