In a project, I set maxMsaSessionAge to 10, but this value is in milliseconds (and I assumed it was seconds).

But, with 10ms, each MSA session got destroyed immediately - this showed some weird stacktraces, where database connections got lost.

We need some stress testing with maxMsaSessionAge=1 with some complex scenarios, where the databases are not with load_at_startup=true, but with database-connections - see the setup for #11871
