History

#1 - 10/08/2026 04:55 AM - Dănuț Filimon

In #10566-72, the main idea was to run incremental conversion between modules, with the files of one module being shared by another. The problem was that the performance ConversionData.clean() is very bad when hundreds of files are deleted (it looks like the conversion gets stuck, but it is just very slow).
