#### Description

P2J have strange conversion of the APPEND option:

1. In Progress it affects whether the output records will be appended to the temp-table of the calling procedure. In P2J this option affects whether the records of the temp-table of the called procedure will be cleared before copying data from the temp-table of the calling procedure.

2. If we have

```
create rec.  
  define input parameter table for rec.
```

then in P2J the created record will be deleted (unless APPEND option is specified). But, again, this is not what APPEND option is for.
