Add a GUI for test recording. This would be a Swing emulator window with a toolbar that provides recording features.

The feature set really needs to be explored and designed before significant work can be done. It would be possible to implement this in a quick/dirty manner as well as the end-all solution. In most cases it would seem to be VERY difficult to handle all the fine tuning needed to get all recorded tests working 100% reliably, so the top-end solution may be hard to achieve.
