Description			

History

#1 - 09/29/2012 06:58 AM - Stanislav Lomany

Admin UI -> Access Control -> Show all

Try, say, to edit rights of "system" resource type:

1. double-click on the value in the "Rights" column of the appropriate row - rights editor dialog should appear
2. say, the "check" field value is "true"; change it to "false" and close the dialog with the upper-right cross - obviously, value is not saved
3. call the same rights editor dialog again, change the value to "false" and press the "save" button
4. call the same rights editor dialog again, change the value to "true" and close the dialog with the upper-right cross - value is SAVED.

The reason is about *edit* function of *RightsEditor classes. They share the same logic:

```
// display the dialog
dialog = AdminUtils.modalDialog(client, "Function Rights", edit);
dialog.setVisible(true);

// process the results
dialog = null;

if (!saving)
{
    return null;
}
```

saving attribute is not reset before the dialog is displayed
