This task is about defining temporary and permanent database tables with a mix of case-sensitive and case-insensitive character fields. The schema (along with any supporting artifacts, like dmo_index.xml) should convert properly. Queries referencing these fields in where clauses and by clauses should convert correctly and operate properly at run time.

- *Status changed from New to Closed*

- *Assignee changed from Ovidiu Maxiniuc to Eric Faulhaber*

- *Start date set to 05/01/2013*

- *% Done changed from 0 to 100*

- *Due date set to 05/02/2013*

I've reviewed the schema and code conversion, and the runtime code. It appears case-sensitive fields are dealt with properly throughout.
