Blocked by TRPL - Feature #1759: design a database to back all TRPL processing	**New**

History

#1 - 10/30/2012 07:27 AM - Greg Shah

This task is about the P2J-specific portions of the database backed conversion. However, the database support for TRPL backing requires a related but different set of features. Those features will be created in [#1759](#). These TRPL features will be leveraged by P2J, but this task is designed to extend these features to support all the ConversionDriver requirements including all inputs (source code, schemas, keyword ignore lists...), configuration (hints, global cfg...), intermediate forms (ASTs, cache files, pphints...), outputs (Java source code, Hibernate cfgs, DDL, runtime XML inputs...).
