Description			

History

#1 - 10/30/2012 01:57 PM - Eric Faulhaber

Customers often have cryptic file names for their external procedure files, due to file system limitations of the past. Currently, we support database schema name customization, but not file-level name customization. Adding this feature will require cooperation with customers to understand their conventions and determine their needs, but the support mechanism should be as generic as possible.
