I can't find a Redmine task that corresponds to this. The results are already committed to CVS and applied to staging.

Please update the P2J Runtime Installation, Configuration and Administration Guide to document:

1. What this facility does and why it is useful.
2. How does it work?
3. How does the administrator configure and use this facility?
4. Issues to be aware of.
5. ???

Also, please make an estimate of the time needed for this task.
