There is a weird behavior in TRPL. The following code doesn't generate a NPE (when it should have NPED):

```
<rule-set>
  <variable name="ch" type="java.lang.String"/>
  <init-rules>
    <rule>ch = null</rule>
    <rule>ch.equals("bar") or ch.equals("foo") /* no NPE is generated here */
      <action>println("aaa")</action>
    </rule>
  </init-rules>
</rule-set>
```

while the next one does:

```
<rule-set>
  <variable name="ch" type="java.lang.String"/>
  <init-rules>
    <rule>ch = null</rule>
    <rule>ch.equals("bar") /* NPE is generated here */
      <action>println("aaa")</action>
    </rule>
  </init-rules>
</rule-set>
```
