Description			

History

#1 - 12/02/2004 01:58 PM - Nick Saxon

@18855 - New options:

Few more preprocessor options have to be implemented. The names given below are preliminary.

`-stats filename`

turns on statistics collection and output into the 'filename';

`-log filename`

turns on log file creation as 'filename';

`-hints filename`

turns on code conversion hints output to 'filename';

`-var`

produces all variations of the source file;

`-batch-mode yes/no`

gives value to the BATCH-MODE builtin variable;

`-opsys "text"`

gives value to the OPSYS builtin variable;

`-window-system "text"`

gives value to the WINDOW-SYSTEM builtin variable;

#2 - 09/18/2011 06:02 PM - Greg Shah

@45190 - support update:

Support already exists at this time for WINDOW-SYS, BATCH-MODE, OPSYS and the hints filename.

#3 - 04/12/2012 11:23 AM - Greg Shah
