During #2104 work, I ended up with a consistent error in a 3-way CTRL-C test, when the runtime testing was ran from ant. The test fails as MAJIC can not connect to the RFQ server (the GSO side shows the "An error has occurred attempting to connect to the selected database system." message - this is not a 4GL message, but an explicit error message in the MAJIC code).

Note that no errors were logged and manual testing works (using the same GSO/RFQ server instances as used for runtime testing).
