- Status changed from New to WIP

#3 - 01/31/2014 03:05 AM - Marius Gligor

- File mag_upd20140131a.zip added

I fixed the issue related to server key store import. It was a misunderstanding related to implementation.
For a web client first a temporary session is established using a temporary account.
Inside the main loop of ClientCore.start user credentials are used.
As a result I reverted the changes from MainEntry, StandardServer and TemporaryAccount classes.
Also the Result class is no longer used and has been deleted.
This design gracefully simplify the ClientCore.start code.
Basically the code looks (main loop of ClientCore.start) like before introducing web clients.
Also I added some JS code inside the web pages which prevents the back navigation and disable the browser context menu.
Nevertheless we have to do more works on the JS front-end depending on the final solution we will choose.
