Calling a function of extent return type is causing the error "Could not resolve closest legacy method for class XYZ".

The problem seems to be in ProcedureManager in the method resolveClosestMethod. The logic there expects a method ending with the string "function" in its name on the Java callstack. And because it compares the strings case-sensitively it fails in case of the extent-function - in which case there is "extentFunction" on the callstack.

I am attaching a fix which seems to work ok.

OK, leave only the function related change, the procedure compare can be done case-sensitively.

- Status changed from New to Feedback

#5 - 04/25/2014 03:39 AM - Constantin Asofiei

The change is OK, no regression testing is required. But before releasing it, make sure the code respects the 98-chars width limit for lines. It should look something like this:

```

    if (cname.equals(bmClass)&&
        ((function && mname.toLowerCase().endsWith(funcApi)) ||
         (!function && mname.equals(procApi))))

```

#6 - 04/25/2014 01:12 PM - Hynek Cihlar

- File hc_upd20140425a.zip added

Attached is the final change with the fixed code formatting. Committed into bzd revision 10516. No regression test run.

#7 - 04/25/2014 01:13 PM - Hynek Cihlar

- % Done changed from 0 to 100

#8 - 04/25/2014 03:09 PM - Greg Shah

- Target version set to Milestone 11

- Status changed from Feedback to Closed

#9 - 11/16/2016 12:07 PM - Greg Shah

- Target version changed from Milestone 11 to Cleanup and Stabilization for Server Features
