This is not a 4GL feature, but rather it is meant to provide a mechanism that duplicates what is possible in normal terminal emulators. As we allow in the Swing ChUI client:

- You can select a rectangular section of the characters on the screen and then you can copy that text into the clipboard. In the Swing client, we do this with a popup menu.
- You can paste text from the clipboard into the current focus (just like entering keys on the keyboard) using the popup menu.
