From [#2252](#) note 138:

Doesn't it still generate the WINDOW-CLOSE 4GL event? It is very common to have code like ON WINDOW-CLOSE OF FRAME my-frame and this app does it thousands of times.
The other caption buttons (and OS actions that cause the same result) will also generate these:
WINDOW-MAXIMIZED
WINDOW-MINIMIZED
WINDOW-RESIZED
WINDOW-RESTORED

The 4GL WINDOW events generated via mouse/caption button/etc need to be implemented.

Are these events implemented already?
