- Description updated

The following sample causes an NPE when run converted in P2J:

```
DEFINE FRAME f WITH SIZE 80 BY 15.  
DEFINE VARIABLE e AS HANDLE.  
CREATE EDITOR e assign  
    FRAME = FRAME f:HANDLE  
    VISIBLE = true.
```

When VISIBLE set after the CREATE statement, the program works:

```
DEFINE FRAME f WITH SIZE 80 BY 15.  
DEFINE VARIABLE e AS HANDLE.  
CREATE EDITOR e assign  
    FRAME = FRAME f:HANDLE  
    VISIBLE = false.  
e:VISIBLE - true.
```

#2 - 08/25/2014 11:01 AM - Greg Shah

- Status changed from New to Rejected

This is a known problem that will be resolved as part of [#1791](#). Our dynamic widget support is not yet functional. We only have conversion and compilation support, but the runtime is known to be unfinished.
