Target version:		case_num:	
billable:	No		
vendor_id:	GCD		
Description			

History

#1 - 04/30/2015 12:26 PM - Greg Shah

- Subject changed from *Generated getter name clash* to *generated frame getter/setter names can conflict with existing CommonFrame APIs*
- Description updated

If you have a COMBO-BOX widget named 'x' then in the generated code for the enclosing static frame there will be method public character getX() which causes compilation error as there is a method public NumberType getX() in the CommonFrame. See an attached sample .p program.
