

Conversion Tools - Bug #2609

Modify conversion processing so that basename can be specified with a trailing /

if ~/projects/testcases/uast/cfg/p2j.cfg.xml sets the "basepath" parameter with a trailing "/" (for example, <parameter name="basepath" value="./src/widgets/" />), then a generated ast file with .ast extension has a left one char trimmed annotation with key "relative-name". For example, for ./src/widgets/radioSets.p a generated file radioSets.p.ast has a trimmed annotation <annotation datatype="java.lang.String" key="relative-name" value="adioSet.p"/>
