Yes.

#4 - 11/17/2015 08:19 AM - Greg Shah

- Start date deleted (11/09/2015)
- Assignee set to Eugenie Lyzenko
- Target version set to Milestone 12

#5 - 11/18/2015 02:39 PM - Eugenie Lyzenko

- File evl_upd20151118b.zip added

The issue investigation has been performed. The original event processing logic need to be restored inside ScrollableSelectionListGuiImpl. The idea to handle the condition like this is to emit ESCAPE key for drop-down when pressing mouse outside the drop-down. This cause the drop-down to be closed because it generates the LEAVE event. After processing LEAVE the proper exitDropDown() is called automatically. If someone has consideration for why we need this extra exit call - let me know please.

So we do not need to explicitly call exitDropDown() at the end of the leaveAndRepostMouse(). Moreover this method is very sensitive to the event ordering. It is not correct to call exitDropDown() twice for drop-down.

The attached fix resolves this issue.

Code Review evl_upd20151118b.zip

(Originally posted to [#2831](#) by accident)

I am fine with the change. My only concern is what it may regress, since the code was put there deliberately by Constantin in ScrollableSelectionListGuiImpl.java change 008 (rev 10944).

Constantin: what do you think?

I'm OK with the change.

#8 - 11/20/2015 09:59 AM - Greg Shah

- % Done changed from 0 to 100
- Status changed from New to Closed

Update evl_upd20151119a.zip (for both [#2833](#) and [#2834](#)) committed to 2677a as revision 11071.

#9 - 11/16/2016 12:12 PM - Greg Shah

- Target version changed from Milestone 12 to GUI Support for a Complex ADM2 App
