From Sergey:

I have tested the trunk version of p2j against ./ask-gui.p. It seems that there appears new bug. If print the existing program "./hello.p" to fill the "Program name:" field and then press enter. Then on "Message Update" dialog select "Y" and press the enter. Trying to repeat these steps freezes the application on the "Message Update" dialog. This is the same kind bug as it was #2778 but with the different scenario.

When the program "freezes", does it take mouse input? Can you move the dialog-box window for example?

It is possible to move dialog-box by holding the mouse but the keys input is frozen. May be the root cause is the same as for 2778 that the current focus owner window is null, but in that case java.awt.DefaultKeyboardFocusManager simply discards the keys input.

#4 - 01/15/2016 12:59 PM - Sergey Ivanovskiy

New detail is that the ESC key can close the dialog-box, thus the keys input is not frozen.

Ok, I am seeing the same. This is a duplicate of #2954.

**#6 - 01/15/2016 01:55 PM - Greg Shah**

- *Status changed from New to Rejected*

I'm closing this since it is a duplicate of [#2954](#). I've linked this as related so that the recreate can be found easily.
