It seems like NEXT-TAB-ITEM is fully implemented in our runtime (see GenericWidget.getNextTabItem(), LogicalTerminal.getNextTabItem() and ThinClient.nextTabItem()).

Perhaps I am missing something?

See the getNextTabItem() in GenericFrame and FrameWidget - for the FRAME widget, this attribute is not supported.

- Subject changed from implement NEXT-TAB-ITEM runtime support to implement FRAME:NEXT-TAB-ITEM runtime support
- Target version deleted (Milestone 12)

OK, so our widget-level support is good, we just need to implement for FRAME.

I've checked the usage in the current customer app and it is always using non-frame widgets for NEXT-TAB-ITEM and/or the code is actually dead code.

For this reason, I've removed this task from the customer milestone.
