I believe this is related to the read/write attributes of buffer-field: VALIDATION-EXPRESSION and VALIDATION-MESSAGE. The 4GL docs suggest that if you write to these there may be some kind of dynamic compilation going on.

Eric: was there anything else you were referencing when you mentioned this?

Most (if not all) of the work on this was already done in [#3275](#) (see [#3275-113](#) and later).
