When typing in a password fill-in widget, the cursor moves incorrectly instead of staying at the position the last key was typed. From my experience with it, I can estimate that its location uses the text length of actual password instead of n asterisks. Typing multiple letters i the cursor stays behind, while typing the wider letter M the cursor will go ahead doubling the distance where it should be. Typing in asterisks, the cursor behaves normally.

#2 - 03/02/2017 11:25 AM - Ovidiu Maxiniuc

I have fixed this while working on #2676 (the password character is different from theme to theme).
