Description

History

#1 - 09/28/2017 12:11 PM - Greg Shah

The following reports must be output during conversion:

- A list of the queries that don't have a matching index.
- A list of the indexes that are not used.
- A list of thee database fields that are not referenced.

The output can be a simple text file that is an artifact of the conversion process. It is understood that:

- This is not part of the Code Analytics because the knowledge to calculate these reports does not exist at that time.
- The reports are only valid for code that implements static database usage. Dynamic database usage will not be included.
