For the moment, FWD runtime does not support queries (PreselectQuery) for multiple tables that also have a client-side where expression. An java.lang.IllegalStateException: Cannot have a multi-table query with a client-side where clause will be thrown in such cases.

Although such a conversion is not a good outcome, we need to support it as a fallback.

As part of this task, we probably also want to log a conversion warning whenever we convert a query to have a client-side where expression (multi-table or not), if we don't do that already. These situations are highly suspect in terms of performance, so we will want to identify them early.
