History

#1 - 08/23/2018 09:41 AM - Greg Shah

Provide a web UI to:

- Define/edit/manage the root nodes list.
- Define/edit/manage hints.
- Re-run call-graph analyzer (incremental mode at least, but probably the full run too).

The objective is to make it easier to iteratively complete the graph (e.g. to get rid of all ambiguous references).
