- Related to Feature #3269: implement optional enhanced mode for ABL GUI which supports dynamic layout added

#2 - 01/11/2019 04:18 PM - Greg Shah

In #3269, the foundation for dynamic layout was implemented and both Window and Browse were enabled. See that task for details of our objectives.

In this task, the following should be done:

- Enable all widgets for dynamic layout. The way each widget responds will be different. For example, editor may want to take up more space in both dimensions but fill-ins will mostly want horizontal space.
- Implement the layout strategies, widget/frame/window options for configuration and media query support which selects the right strategy.
