

Base Language - Bug #4891

Feature # 4384 (Closed): Builtin OO Implementation

Nested method calls ignore 'silent' (no-error) option.

09/15/2020 02:59 AM - Marian Edu

Description	
<p>It looks like when a method is calling another method the original 'no-error' option used is ignored and the error thrown from second method is not thrown but displayed directly and error-status is not set.</p> <p>One test case that can reproduce it - oo/openedge/net/http/authorization_header_builder/property_header.p</p> <p>This usually happens if block-level error, thrown is not set but I double check in this case and that option is set on execute of the class and it's base class.</p>
