- Subject changed from improve automatic calculation of ADM/ADM2 linkages to improve automatic calculation of ADM/ADM2 call graph linkages

We already handle this in part, but there must be ways to improve this calculation. A large number of the ambiguous call sites in real GUI applications tend to be in the ADM/ADM2 code. Making this automatic would be a great benefit.

We might want to use #3695 to understand the flows and then write analysis code to setup the linkages we are finding.
