History

#1 - 11/23/2020 11:05 AM - Constantin Asofiei

Under windows, the 'X' conversion mode (which relies on a file with ignore list specifications), doesn't work 'out-of-the-box'. For example, if a file-ignore-list.txt under linux has:

`./abl/possenet/*`

and if you change this to backslashes like:

`.\abl\possenet*`

FWD will not process it properly. The only pattern which can be processed properly as of 3821c rev 11832 (from trunk 11348) is:

`.\abl\possenet*`

where all the slashes are switched to doubled backslashes.

We need to allow a generic, linux-style file-ignore-list.txt to be processed under windows, too.

- Related to Feature #3396: shift searchpath and other pathing lists in the directory to use the platform neutral comma added

#6 - 02/10/2021 07:51 AM - Greg Shah

- Related to Feature #3927: conversion mode that takes a file spec and a file blacklist added

#7 - 02/13/2021 06:21 PM - Constantin Asofiei

- Status changed from New to WIP

- Assignee set to Constantin Asofiei

- % Done changed from 0 to 100

Fixed in 3821c rev 12009.

All files in the include/exclude list must use Linux-style separator and this will be replaced with the running OS separator.
