The test code:

```
define frame fr
  with centered size 80 by 20 side-labels.

define variable fg as handle.
assign fg = FRAME fr:handle:first-child.

fg:FONT = fg:FONT.

enable all with frame fr.
wait-for go of frame fr.
```

The error messages do differ.

In OE:

```
FONT is not a queryable attribute for FIELD-GROUP widget. (4052)
```

In FWD:

```
FONT is not a queryable attribute for FIELD-GROUP ?. (4052)
```

The difference is probably caused by how the widget name is formed in GenericWidget:

```
protected String widgetName()
{
  character name = name();
  return dynamic && name.isUnknown() ? "widget" : name.toStringMessage();
}
```

Probably, the correct code may look like this?

```
protected String widgetName()
{
  character name = name();
```

```
return dynamic || name.isUnknown() ? "widget" : name.toStringMessage();  
}
```
