#2 - 02/02/2021 11:42 AM - Stanislav Lomany

FWD has undocumented sessionFree AppServer configuration parameter. The only thing it does, it defines if session-free (with "-sessionModel Session-free" option) or session-managed connections are allowed by this server. AFAIK 4GL doesn't have this configuration parameter and type of allowed connections is defined by server operation mode.

Additionally, 4GL has a separate error like "The Session-free connection failed because the AppServer is in a session-managed operating mode (State-reset). (13511)" for this case, while FWD just fails to connect to an AppServer as if it is down.
