From [#5120-7](#):

... rev 1010 of the xfer testcases project contains a set of tests of how literals are parsed as date/datetime/datetime-tz. See the date.literal.tests/ folder, use literals.json as input and jstest.p as the program. There are still some differences between the error messages raised in 4GL and FWD.

This task is meant to fix the deviations in the error reported when parsing invalid date/datetime/datetime-tz literals. Compare the .fwd and .4gl files in the date.literal.tests/ folder to see the differences.
