To replicate the issue, create a program with two legacy windows, display a HTML-BROWSER widget in one window and then switch to the other window. The browser widget should be drawn behind the second window, but overlaps.

- File start.p added

I checked a custom testcase and can't reproduce anything suspicious. I used 3821c/rev. 12446 and the attached files. This issue is either fixed in the meantime or I am missing something in my testcase. Can you tell if this should have reproduced #5214-1?

Also please try SPREADSHEET. It may be widget specific.

#7 - 05/25/2021 07:30 AM - Adrian Lungu

- % Done changed from 0 to 80

Replaced the HTML-BROWSER with a SPREADSHEET in my testcase and the result is as expected. I will try to look into a customer application to see if I can reproduce it there - maybe there are other factors which can trigger the issue.

#8 - 09/22/2021 03:43 PM - Greg Shah

Is there any reason to leave this task open?

#10 - 12/07/2021 05:08 AM - Alexandru Lungu

- Status changed from WIP to Review

- Assignee changed from Adrian Lungu to Alexandru Lungu

- % Done changed from 80 to 100

I think this can be closed as #5688 was a customer specific issue which reproduced [#5214-1](#) and it was fixed.
