

Database - Bug #5930

With some Java UDFs ERROR-STATUS can contain duplicate error messages

Most Java UDFs delegate the real work to the general-purpose code which can use ErrorManager calls. With the new logic for processing errors raised by UDFs, this can result in duplicate error records in the ERROR-STATUS.
This is the issue only for H2 databases where UDFs are executed in the same JVM as the application code. For PostgreSQL, even with Java UDFs, it is not a problem.
