If a key is not accepted by the current format (?), it should do nothing in 4GL.

```
def var i1 as integer init 5.  
def var d2 as decimal init 7.77.  
def var date1 as date init "11/12/2023".
```

```
display i1 d2 date1 with frame fr.  
enable i1 d2 date1 with frame fr.
```

```
wait-for close of current-window.
```

Sample scenario 1: press "x" - nothing should happen (in FWD field value becomes "0" and selection is gone).

Sample scenario 2: select the second digit in the second field ("7.77") and press "x" - nothing should happen (in FWD field value becomes "7.07" and selection is gone).
