- Assignee set to Constantin Asofiei

Make the global section of p2j.cfg.xml simpler with the following changes:

- Set good default values for P2J_RULES, pat_path, registry, rootlist, matchlist and comments. These should be removed from most of our existing projects since the values are very standardized.
- Remove merge-point and foreign-keys. I think they are dead, right?

If you see any other cleanups, I'm open to it.

#2 - 02/28/2024 09:43 AM - Greg Shah

I think we want to move away from p2j.cfg.xml to a project-level .json file that has everything needed to configure the conversion. To the degree that this can also drive a docker-ized runtime, that would be even better.
