Comparing the results of the testcases/locks/locks.p I see a number of differences:

1. With FWD a see a strange record in the _Lock VST with _Lock-RecId == -9223372036854775808 (-8000000000000000 hex)
2. in some cases the value of the _Lock-Type is 0 instead of REC
3. in most cases the value of the _Lock-Flags is UNKNOWN.
4. in some cases the value of the _Lock-Flags is different from one with 4GL.
