- Subject changed from *addSourceBuffer can have the fields qualified with the table name* to *ADD-SOURCE-BUFFER can have the fields qualified with the table name*

I've seen in customer code a call like `ADD-SOURCE-BUFFER(bufHandle, "tt1.f1,tt1.f2,tt1.f3")`, i.e. the fields are qualified.

Currently I'm just extracting the fields (last token on dot separator) - Ovidiu, please take a look if there's more to it.

This is for branch 6129a.
