Description			

History

#1 - 05/27/2022 10:12 AM - Greg Shah

Customers require the following:

American English	en-US
Brazilian Portuguese	pt-BR
Castillian Spanish	es-ES
Czech	cs-CZ
Dutch	nl-NL
French	fr-FR
German	de-DE
Italian	it-IT
Japanese	ja-JP
Korean	ko-KR
Latin American Spanish	es-MX
Polish	pl-PL
Simplified Chinese	zh-CN
Traditional Chinese	zh-TW

If it is not too much more work, we would also prefer these added:

European Portuguese	pt-PT
Romanian	ro-RO
Russian	ru-RU
UK English	en-GB

#2 - 05/27/2022 10:24 AM - Greg Shah

For each language to be added, I think we have the following work:

- implement the database collation support (custom locales for PostgreSQL, SPI for H2/Java, something else for other databases like MariaDB)
- implement the resource bundles for messages both FWD and legacy messages including all errors (see [#4762](#))
- implement keyboard support (at least in javascript)
- test to confirm it is OK, we may need to expand testcases to have coverage of these cases

Am I forgetting anything?
