We need to add screens, menu items and the backing functionality to complete the admin console including:

- editors for all of the various configurable features not currently supported (appservers, web clients, 4GL runtime features, ...)
- arbitrary directory view/edit (this provides a "fallback" for online editing of a value for which we don't yet have an editor in the admin console (and also allows application-specific usage of the directory)

#2 - 06/03/2022 08:47 AM - Greg Shah

We may want to consider a UI for SQL access to a connected database, especially H2. The idea is that an admin (or developer) might find it to be very powerful to be able to submit SQL/inspect/edit data from the perspective of the server.
