History

#1 - 10/06/2022 03:25 AM - Constantin Asofiei

For complex applications, with 1000s (or maybe 10k's) of buffer definitions in 100s of programs or legacy classes, the buffer define and delete looks slow (both in the profiler and JMX bean). Some parts were related to BufferManaged/ScopedList which were fixed in 3821c and 6129a.

This task is meant to create some complex standalone tests and determine how the buffer definition and delete can be improved.
