gradle relies on 3rd party repositories like jboss, maven, oracle, jitpack.

Today, jitpack seems down (https://jitpack.io/com/github/jeremyh/jBCrypt/jbcrypt-0.4/jBCrypt-jbcrypt-0.4.pom is not working), and FWD will not be able to build on a clean machine (where there is no prior cached jars in the ~/.gradle folder).

We should build a mirror of all FWD dependencies on proj.goldencode.com/artifacts (or /repository), and let gradle fallback to this, if some dependency can not be resolved. A point is the GCD repository should not be the main repo, but a secondary one, in case the default/main one is down.
