The GenerateLegacyProxyOpenClient tool uses annotations/legacy_services.xml to perform a minimal annotation of the ASTs, for proxy generation. This in turn uses annotations/functions.rules, which relies on ftypesByName map defined in annotations.xml. This ftypesByName needs to be defined in legacy_services.xml, and is OK for it to be empty, as its usage is for DYNAMIC-FUNCTION calls, which do not matter for proxy generation.

Task branch 7284a was created from trunk rev 14538.

The fix is in 7284a/14539.

Code Review Task Branch 7284a Revision 14539

No objections. Please add a comment to explain that these maps are there to hide the ones in annotations.xml and that they should remain even though they are unreferenced.

Added in 7284a rev 14540.

#5 - 04/18/2023 01:53 PM - Greg Shah

You can merge to trunk.

#6 - 04/18/2023 02:13 PM - Constantin Asofiei

7284a was merged to trunk 14539 and archived.

#7 - 04/18/2023 02:33 PM - Greg Shah
