

User Interface - Bug #7633

some trigger issues: PAUSE must not raise a trigger and no PAUSE exists when UPDATE is finished

History

#1 - 07/21/2023 03:07 PM - Constantin Asofiei

There is this test:

```
def var ch as char.  
  
form ch with frame f1.  
  
on any-key anywhere do:  
  message "a" last-key keylabel(last-key).  
  run proc0.  
  message "e" last-key keylabel(last-key).  
end.  
  
procedure proc0.  
  
  def var v as char.  
  form v with frame f2 side-labels.  
  message "b" last-key keylabel(last-key).  
  on any-key of v in frame f2 do:  
    message "c" last-key keylabel(last-key).  
    pause.  
  end.  
  update v with frame f2.  
  message "d" last-key keylabel(last-key).  
end.  
update ch with frame f1 side-labels.
```

Issues are like this:

- pause should not execute a trigger for the key.
- there is no pause after update d has finished.
